Kevin Lui Ph.D.

: https://kevinlui.org
: Seattle, WA
: kevinywlui@gmail.com
: https://github.com/kevinywlui
Citizenship: USA

Education

- **University of Washington, Seattle** — Seattle, WA
  Ph.D. in Mathematics specializing in Computational Number Theory under William Stein — *June 2019*
- **University of California, Santa Barbara** — Santa Barbara, CA
  Bachelors in Mathematics — *June 2014*

Programming Skills

- **Advanced:** Python, Sagemath, Latex, Git
- **Intermediate:** PostgreSQL, GNU/Linux
- **Basic:** Bash, MATLAB, C, C++, Cython

Experience

- **University of Washington** — Seattle, WA
  Researcher in Computational Number Theory — *Sep. 2014 — Jun. 2019*
  - **Overview**: Thesis research centered around creating and implementing algorithms for computing invariants of modular abelian varieties. I was able to create algorithms for computing certain invariants where existing methods where computationally infeasible or non-existent.
  - **Technical skills used**: Code was written using the Sagemath Python library. Experiments were done using Jupyter notebooks. Tables of related invariants were computed and stored in PostgreSQL databases.
  - **Link to thesis**: https://kevinlui.org/pages/thesis
- **Sagemath Open Source Project** — Online
  Developer and User — *Jun. 2016 — Present*
  - **Overview**: Active developer and user of Sagemath which is a Python mathematics package, similar to scipy, suitable for research-level number theory computations. See https://www.sagemath.org/
  - **Contribution stats**: Authored 25 tickets, 19 of which has been accepted. Reviewed 10 tickets.
  - **Link to code contributions and code reviews**: https://kevinlui.org/pages/code#sagemath
  - **Sage days 87 - workshop/coding spring**: Finished old tickets to improve functionality of elliptic curves.
- **Google Summer of Code - Sagemath** — Online
  Student Developer — *Summer 2016*
  - **Overview**: Implemented algorithms found in research papers on modular abelian varieties in the Sagemath Python package.
  - **Outcome**: This code has been merged into the master branch https://trac.sagemath.org/ticket/21496 and is the foundation for my Ph.D. thesis work.
- **University of Washington Sage Seminar** — Seattle, WA
  Organizer — *Jun. 2019 — Aug. 2019*
  - **Overview**: Mentored a group of math graduate students towards contributing to the Sagemath open source project. We had 8 meetings lasting 1-2 hours.
  - **Primary role**: Introduced members to the Sagemath codebase. Taught members the Sagemath development process.
  - **Outcome**: Six attendees have made their first open source code contribution!

Programming Coursework

All taken as an undergraduate at UC Santa Barbara. Primarily used C++.
• Data Structures and Algorithms, Formal Languages and Automata, Cryptography, Computer Theorem Proving, Logic

Projects

- **Links**: https://kevinlui.org/pages/code/
- **caleb**: Python package that helps with Latex citation by automatically retrieving bibliographic information from publicly available online sources. Used travis for CI, pytest for testing, and poetry for dependency management. See https://github.com/kevinywlui/caleb
- **Sagemath – isomorphism testing**: Implemented isomorphism testing of modular abelian varieties into the Sagemath Python library. Currently in the process of being merged. See https://trac.sagemath.org/ticket/28275
